

Vulcan Pavement Markers

The Vulcan Pavement Marker is an inexpensive and quick way to identify your pipeline, fiber/copper, or any buried utility when traditional markers are not appropriate (i.e. urban and residential areas).

The pavement marker requires no adhesive application; simply peel off the back and stick down. (For best results, the pavement area should be free of oil and/or any debris that could interfere with the adhesion of the marker, and temperature should be at least 60°F.)

Custom markers can be provided with your company name and phone number.

Standard sizes are 5" x 4" & 10" x 5". Other sizes are available.
